

- QUADRA II is a wall-hung boiler with **compact dimensions and low lift weight** which enable a flexible installation almost anywhere in the home.
- Efficiency ★★ according to European Directive EEC 92/42 (on C.S.I. model).
- Beretta primary heat exchanger in copper.
- **DHW plate heat exchanger in stainless steel.**
- Simple and easy-to-use , control panel with white backlight digital display and diagnostics LEDs signaling boiler status.
- **NEW DIN connections**, to enable an easy installation both as a replacement or in new buildings with the same configuration.
- Selectable 3-speed circulator, located on the right side of the boiler (frontal view).
- “Survivor” function in DHW mode, allowing the boiler, in the event of failure of the DHW NTC probe, to continue to operate.
- Reduced waiting time for DHW supply thanks to **pre-heating function.**
- Built-in climatic thermoregulation that can be activated through the external probe (as option) for a high comfort level inside the house.
- S.A.R.A. system: automatic temperature control in heating mode.
- Electrical protection IPX5D.
- 8 l expansion vessel, allowing to support circuits with high water contents.
- Double air inlet allowing to fit easily in the existing flues.
- Hydraulic connections, gas and DHW taps (available as option) to make the installation easier.
- Suitable for the connection with remote control panel Beretta (available as option).

Circulator anti-blocking cycles

IPX5D electrical protection

Flame detector

Frost protection system

“Survivor” function

Flues evacuation pressure switch (C.S.I. model)

1 Three diagnostic LEDs

2 White backlight digital display

3 On/off/Summer/Winter/Reset/Heating Temperature Selector

3a “S.A.R.A. function” selector

4 DHW temperature/Pre-heating activation selector

5 Hydrometer

Outstanding comfort from a compact appliance

QUADRA II is available in combi version, both as conventional flue and room-sealed models, with 24 kW output. The range boasts some important features such as the built-in climatic thermoregulation, that can be activated through the external

probe (as option), for a higher comfort inside the house, and is suitable for the connection with Beretta remote control panels (as option), to manage all the boiler functions and check the boiler status from a remote location. The user can also activate the pre-heating

function to enable a quicker supply of domestic hot water, while reducing the waiting time. Thanks to its compact dimensions, the boiler can be sited almost anywhere in the home.

- 1 Gas valve
- 2 Water pressure switch
- 3 DHW NTC probe
- 4 Safety valve
- 5 Burner
- 6 Primary heat exchanger
- 7 NTC probe
- 8 Fan
- 9 Double air inlet for twin system
- 10 Flues thermostat
- 11 Flues evacuation pressure switch
- 12 Expansion vessel
- 13 Flow switch
- 14 Circulation pump with anti-blocking function
- 15 DHW heat exchanger
- 16 3-way valve

New configuration with DIN connections

The new QUADRA II models, thanks to the configuration with DIN hydraulic connections, represent the ideal solution for an easy and quick installation, both in case of replacement and of new buildings with the same configuration.

KEY:

- F: CH flow 3/4"
- O: DHW outlet 1/2"
- G: Gas 3/4"
- I: DHW inlet 1/2"
- R: CH return 3/4"

S.A.R.A. system: comfort and saving

All the models in the QUADRA II range are equipped with the Beretta patented S.A.R.A. system (Automatic Temperature Control), which can be enabled by moving the temperature control knob of the central heating circuit to the dedicated sector (between 55°C and 65°C). The S.A.R.A system achieves the best compromise between the average temperature of the radiators and the quickness in reaching the required room temperature,

while providing energy and money saving. When there is a demand for heating, the appliance will automatically raise the heating flow temperature twice by 5°C every 20 minutes, in order to heat the home more quickly. When the heating request has been satisfied (see diagram), the appliance will switch off automatically till the next heating request. At that point the boiler will start again at the previously set flow temperature.

Quality and reliability

The new boiler QUADRA II offers highly reliable combustion and electronics and boasts the high electric protection degree IPX5D. Thanks to the high quality components, the range is characterized by safety and solidity. QUADRA II comes with the most innovative safety devices: control systems that check the flame presence, the proper exhaust flue evacuation, the temperatures and pressures. The anti-blocking function on the pump and the frost protection system on the electronic board increase boiler longevity. QUADRA II also boasts the “Survivor” Function in DHW mode, allowing the boiler, in the event of failure of the NTC probe, to continue operating.

High DHW comfort levels

The new boiler QUADRA II is equipped with two heat exchangers: primary heat exchanger in copper and DHW plate heat exchanger in stainless steel, ensuring high DHW comfort.

Thermoregulation, to further enhance your home comfort

The built-in climatic Thermoregulation is a standard feature for QUADRA II range. Your installer just has to connect the external sensor (optional) to QUADRA II electronic board, to enable this function.

The Thermoregulation Function adjusts boiler operation according to external climate changes in order to optimize comfort and maximise saving.
